

PLANET *Flavour Applications*

Flavour Drum

The Planet Flavour Coating Drum is manufactured from stainless steel with bent baffles requiring minimum seam welds for hygiene and ease of cleaning.

The retention time is controlled by adjusting the angle of the Drum to suit the required levels of coating and required throughputs, to ensure a full and even coating.

The unit is mounted on castors for manoeuvrability with screw jacks for stability during use.

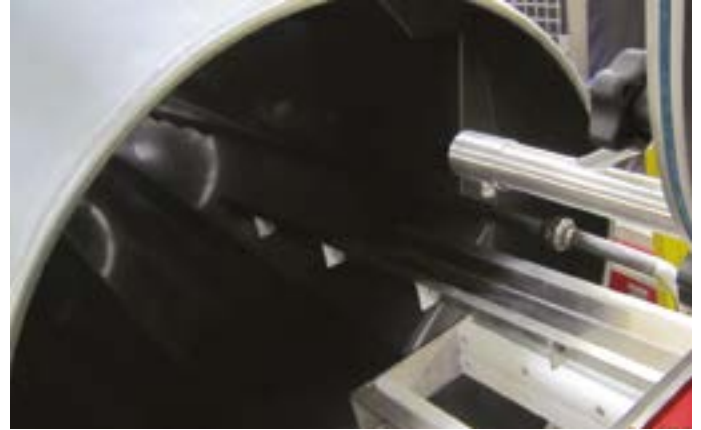

Coating Systems

A flavour coating system is available consisting of two spherical mixing tanks, each equipped with its own mixer.

Water jackets and electrical immersion heaters ensure the flavours are kept at the correct temperature for coating. A variable speed peristaltic pump meters the flavour to the nozzles where the flavour is atomised.

We have also supplied bespoke coating/brining systems comprising of a storage/mixing tank from where solution is pumped into overflow weirs which coat the product as it is conveyed underneath.

Also Available from Planet Dryers;

- Conveyor Band Dryers
- Nut/Seed Roasting Lines
- Coolers
- Product Cutters
- Belt Conveyors, Elevators, Vibratory Conveyors

'Planet Dryers Ltd is an established company who manufacture a wide range of Industrial Dryers and associated machinery suitable for a vast range of applications and industries worldwide'
